

Playora: Browser-Based Gaming Website

1. Project Overview

Playora is a browser-based gaming website where visitors discover and play HTML5 games instantly with no downloads or account creation. The platform hosts 50 to 100 games across 6 categories and includes a secure admin dashboard for content management.

Product Name	Playora
Tagline	Discover. Play. Repeat.
Game Catalog	50 to 100 HTML5 games across 6 categories
Personalization	Favorites and recently played via browser localStorage
Deployment	Vercel, Netlify, Cloudflare Pages, shared hosting, or VPS

2. Pages and Structure

6 page templates + 4 static pages.

Page	File	Key Requirements
Home	index.html	Nav bar, hero with Play Now CTA, Featured/Trending/New Arrivals rows, 6 category tiles, Browse All section, footer
Browse All Games	games.html	Full catalog grid, category filter tabs, real-time search, sort by Trending/Newest/A-Z, breadcrumb
Category	category.html?cat=	Grid filtered by URL param, real-time search, category title and description, breadcrumb
Game Detail	game.html?slug=	AdSense banner, 16:9 iframe, fullscreen toggle, title, description (max 60 words), controls hint, 4 related cards, favorite toggle
Recently Played	recently-played.html	localStorage grid (max 20 titles), empty-state with CTA, clear all option
Favorites	favorites.html	localStorage grid, empty-state with CTA, remove individual or clear all

Static pages (About, Contact, Privacy, Terms): single column, max-width 720 px, same header and footer, H1/H2/paragraph styling only. Contact uses a mailto: link. Privacy must disclose GA4 cookies. Terms must cover acceptable use and disclaimer.

3. Admin Dashboard (/admin)

Username and password login with session timeout. No public registration. Credentials configured during setup. /admin blocked in robots.txt. Features: view all games (paginated table), add/edit/delete games, thumbnail upload with type and size validation, category management (add, rename, reorder, remove), toggle featured and trending listings. Analytics reporting and multi-user roles are not included.

4. Content Requirements

Game cards: 320x180 px thumbnail, title (max 28 characters), one category badge, favorite toggle icon, link to detail page. Game data fields: title, slug, thumbnail, category, description (under 60 words), controls hint (one line), iframe or embed URL, up to 4 related games. No lorem ipsum, no game descriptions over 60 words, no marketing paragraphs.

5. Design and Visual Requirements

Color Palette

Role	Name	Hex
Primary (CTA buttons)	Electric Violet	#7C3AED
Secondary (links, active)	Neon Cyan	#06B6D4
Accent (badges, tags)	Amber Glow	#F59E0B
Background	Dark Void	#0D0D1A
Surface	Card Dark	#1A1A2E
Text	Soft White	#F1F5F9

All text must meet WCAG AA contrast. Dark theme by default. No rainbow palettes or inconsistent CTA colors.

Typography

Display/headings: Poppins or Montserrat. Body: Inter or Roboto. Maximum two font families. Size scale: 12, 14, 16, 20, 24, 32, 48 px. Minimum 16 px body on mobile. Use font-display: swap or self-host fonts. No script or decorative fonts.

Layout

12-column grid desktop, 4-column mobile. 16 px base spacing. Max content width 1280 px. Card gap minimum 16 px. Header: 72 px desktop, 60 px mobile. No horizontal scroll from 320 px upward. Allowed visuals: game thumbnails, category badges, Lucide icons, one logo wordmark, one OG card per page, empty-state illustrations (unDraw or permissive license). No stock photos, 3D renders, or animated GIFs in layout.

6. Performance and Technical Requirements

Requirement	Target
Lighthouse Mobile Performance	85 or above
First Contentful Paint (4G)	Under 2 seconds
Game iframe load (4G)	Under 3 seconds
JS payload (outside iframes)	Max 200 KB
Browser support	Chrome, Firefox, Safari, Edge (latest 2 versions)
Console errors	Zero on all pages

All filtering and search is client-side. Defer non-critical scripts. Lazy-load thumbnails below the fold.

7. Personalization, SEO, and Analytics

Personalization (localStorage)

- Recently Played: recorded on game start, max 20 titles, persisted across sessions, clearable by user
- Favorites: heart icon on cards and detail pages, individual and bulk remove, stored in localStorage
- Continue Playing: last 3 to 4 interacted games shown on homepage

SEO

- SEO-friendly URLs (/game/slug, /category/slug), unique title and meta description per page
- Open Graph tags on game detail and category pages
- sitemap.xml covering all public pages, robots.txt blocking /admin, canonical tags on parameterized views

Google Analytics 4

GA4 tag fires on every page. Defer analytics scripts. Five custom events required:

Event	Trigger
game_start	Game iframe loads on detail page
game_end	User leaves the game detail page
category_click	User selects a category
search_used	User submits a search query
favorite_added	User toggles a game as favorite

8. Client-Provided Assets

The following assets will be supplied by the client before development begins:

- Logo in PNG (transparent background)
 - Website Reference image for UI
-

9. Scope Restrictions

The following must not be built:

1. Public-facing user accounts, login, or registration
2. Multiplayer, real-time networking, leaderboards, or achievement systems
3. Chat, friend system, or social networking features
4. Subscription plans or payment integration of any kind
5. Native iOS or Android apps
6. Multi-language support or AI-powered recommendations
7. Live streaming, email collection, or newsletter forms
8. Pop-up ads, interstitial ads, or crypto integrations
9. WordPress, Wix, or any third-party page builder
10. In-house game development

10. Acceptance Criteria

Delivery is accepted only when all of the following are confirmed:

10. All pages load without console errors on Chrome, Firefox, Safari, and Edge
11. Minimum 10 games are playable end-to-end on the live site
12. Category filtering and search work without page reloads
13. Recently played and favorites persist across sessions via localStorage
14. Admin dashboard allows add, edit, and delete of games behind authenticated login
15. Lighthouse Mobile Performance score is 85 or above
16. First Contentful Paint is under 2 seconds on simulated 4G
17. GA4 game_start and game_end events fire correctly
18. sitemap.xml covers all public pages and robots.txt blocks /admin
19. About, Privacy, Terms, and Contact pages are live with correct content
20. README.md includes working setup and deploy instructions
21. No horizontal scroll on any viewport from 320 px upward
22. Fullscreen gameplay works on iOS Safari, Chrome Android, and desktop
